App Engineering Assessment

Name – Yash Vaishnav
University – Indian Institute of Technology Ropar
Department – Electrical Engineering

PROJECT OVERVIEW –
I have developed an AI Chatbot app using Android Studio as the software and Kotlin as the programming language.
It's an App that focuses on Depression and loneliness, major social issues. It could help people recover from their depressed mental state by cracking some jokes and suggesting inspiring quotes, writeups, videos, etc.
The App uses BrainShop.ai API and JSON Syntax to gather data. Retrofit is used as an HTTP client for Android.
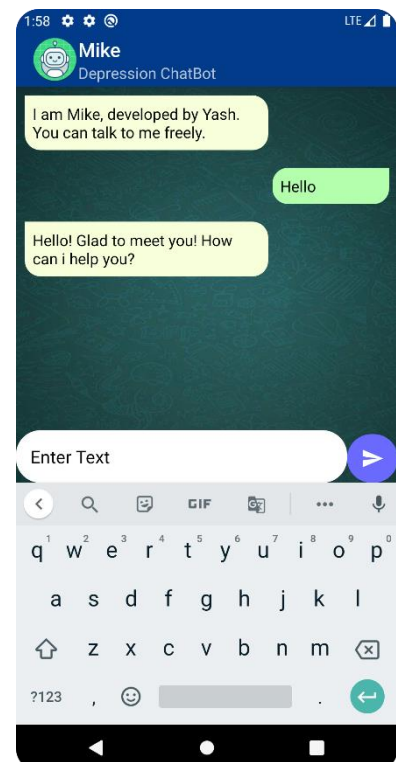

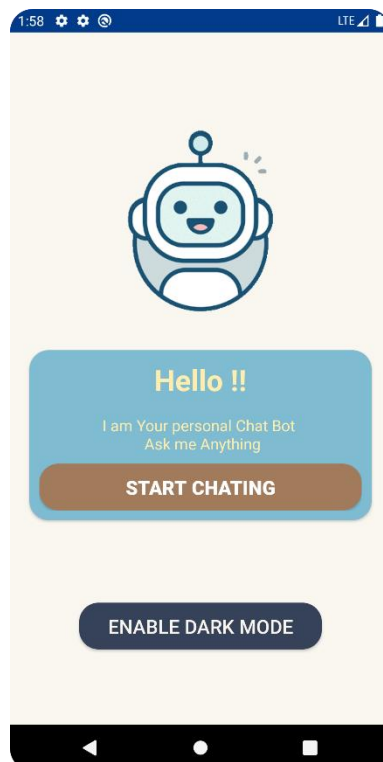

PROJECT REQUIREMENTS –
1. Android Studio – It's software prescribed by google for full-stack App Development
2. Kotlin – Programming Language I used to write the code for the App
3. Brainshop.ai – Website from which I have made API calls for the Bot to work.

USER JOURNEYS –
1) The App is user-friendly.
2) With just 1 Click, the Bot will be available to Chat.
3) The App has a dark mode that will help users reduce eye strain.

SNAPSHOTS –
